

Hydrology Research

An International Journal

volume 51 | issue 2 | April 2020

Contents

Hydrology and water resources management in a changing world

- 143 Editorial: Hydrology and water resources management in a changing world
Kolbjørn Engeland and Knut Alfredsen
- 146 A dynamic river network method for the prediction of floods using a parsimonious rainfall-runoff model
Aynalem Tassachew Tsegaw, Thomas Skaugen, Knut Alfredsen and Tone M. Muthanna
- 169 Testing the applicability of physiographic classification methods toward improving precipitation phase determination in conceptual models
Laurie D. Grigg, James Feiccabrino and Frederick Sherenco
- 180 Precipitation phase uncertainty in cold region conceptual models resulting from meteorological forcing time-step intervals
James M. Feiccabrino
- 188 Can model-based data products replace gauge data as input to the hydrological model?
K. Sivasubramaniam, K. Alfredsen, T. Rinde and B. Sæther
- 202 Evaluation of global forcing datasets for hydropower inflow simulation in Nepal
Bikas Chandra Bhattarai, John Faulkner Burkhart, Lena M. Tallaksen, Chong-Yu Xu and Felix Nikolaus Matt
- 226 Improving hydropower inflow forecasts by assimilating snow data
Jan Magnusson, Geir Nævdal, Felix Matt, John F. Burkhart and Adam Winstral
- 238 Reproducing different types of changes in hydrological indicators with rainfall-runoff models
Carolina Massmann
- 257 Uncertainty of annual runoff projections in Lithuanian rivers under a future climate
V. Akstinas, D. Jakimavičius, D. Meilutytė-Lukauskienė, J. Kriaučiūnienė and D. Šarauskienė
- 272 Response of melt water and rainfall runoff to climate change and their roles in controlling streamflow changes of the two upstream basins over the Tibetan Plateau
Yueguan Zhang, Zhenchun Hao, Chong-Yu Xu and Xide Lai

British
Hydrological
Society

Società Idrologica Italiana
Italian Hydrological Society

Deutsche
Hydrologische
Gesellschaft

- 290 How extreme can unit discharge become in steep Norwegian catchments?
Oddbjørn Bruland
- 308 Features and causes of catastrophic floods in the Nemunas River basin
Vytautas Akstinas, Diana Meilutyté-Lukauskienė, Jūratė Kriauciūnienė and Diana Šarauskiene
- 322 Risk assessment for areas prone to flooding and subsidence: a case study from Bergen, Western Norway
Guri Venvik, Ane Bang-Kittilsen and Floris C. Boogaard
- 339 Limitations in using runoff coefficients for green and gray roof design
Lotte Askeland Schärer, Jan Ove Busklein, Edvard Sivertsen and Tone M. Muthanna
- 351 Detection and attribution of flood responses to precipitation change and urbanization: a case study in Qinhuai River Basin, Southeast China
Guodong Bian, Jinkang Du, Mingming Song, Xueliang Zhang, Xingqi Zhang, Runjie Li, Sengyao Wu, Zheng Duan and Chong-Yu Xu
- 366 Usage of SIMWE model to model urban overland flood: a case study in Oslo
Hong Li, Hongkai Gao, Yanlai Zhou, Chong-Yu Xu, Rengifo Z. Ortega M. and Nils Roar Sælthun
