

Journal of Hydroinformatics

Official Journal of the IAHR–IWA–IAHS Joint Committee on Hydroinformatics

volume 15 | issue 4 | October 2013

Contents

Frontiers and diversification of hydroinformatics for new challenges

- 1059 Editorial: Frontiers and diversification of hydroinformatics for new challenges
Qiuwen Chen and Jianhua Tao
- 1061 Analysis of agricultural pollution by flood flow impact on water quality in a reservoir using a three-dimensional water quality model
Chen Zhang, Xueping Gao, Liyi Wang and Yuanyuan Chen
- 1073 Numerical study of 3D flow at right-angled confluences with and without upstream planform curvature
Dejana Đorđević
- 1089 River instantaneous peak flow estimation using daily flow data and machine-learning-based models
Mohammad T. Dastorani, Jamile Salimi Koochi, Hamed Sharifi Darani, Ali Talebi and M. H. Rahimian
- 1099 Modelling chlorophyll-a in Bohai Bay based on hybrid soft computing approach
Xiang Xianquan, Xu Xiaofu and Tao Jianhua
- 1109 A river system modelling platform for Murray-Darling Basin, Australia
Ang Yang, Geoff Podger, Shane Seaton and Robert Power
- 1121 Evaluating the accuracy of C- and X-band weather radars and their application for stream flow simulation
N. K. Shrestha, T. Goormans and P. Willems
- 1137 Google Android mobile phone applications for water quality information management
A. Jonoski, A. Almoradie, K. Khan, I. Popescu and S. J. van Andel
- 1150 Modelling floods in urban areas and representation of buildings with a method based on adjusted conveyance and storage characteristics
Zoran Vojinovic, Solomon Seyoum, Mwanaisha H. Salum, Roland K. Price, Ahmad K. Fikri and Yared Abebe
- 1169 An ontology-based knowledge management framework for a distributed water information system
Qing Liu, Quan Bai, Corne Kloppers, Peter Fitch, Qifeng Bai, Kerry Taylor, Peter Fox, Stephan Zednik, Li Ding, Andrew Terhorst and Deborah McGuinness
- 1189 Towards a hydroinformatics for China
M. B. Abbott and Z. Vojinovic

Research papers

- 1203 Iterative LP water system optimal operation including headloss, leakage, total head and source cost
Eyal Price and Avi Ostfeld

- 1224 RainIDF: automated derivation of rainfall intensity–duration–frequency relationship from annual maxima and partial duration series
Kian Boon Chang, Sai Hin Lai and Othman Faridah
- 1234 Numerical assessment of bed-load discharge formulations for transient flow in 1D and 2D situations
Carmelo Juez, Javier Murillo and Pilar García-Navarro
- 1258 A preprocessing program for a distributed hydrological model: development and application
Lei Li, Zongxue Xu, Yanli Li, Wenfeng Liu and Lanying Zhang
- 1276 Development of a web application for Low Impact Development Rapid Assessment (LIDRA)
Miguel Aguayo, Ziwen Yu, Michael Piasecki and Franco Montalto
- 1296 Performance assessment of modelling tools for high resolution runoff simulation over an industrial site
M. Abily, C. M. Duluc, J. B. Faes and P. Gourbesville
- 1312 Modeling impacts of highly regulated inflow on thermal regime and water age in a shallow reservoir
Binbin Wu, Guoqiang Wang, Changming Liu and Zongxue Xu
- 1326 Development of method for X-band weather radar calibration
J. E. Nielsen, S. Thorndahl and M. R. Rasmussen
- 1340 Uncertainty assessment of monthly water balance models based on Incremental Modified Fuzzy Extension Principle method
M. Nasser, B. Zahraie, A. Ansari and D. P. Solomatine
- 1361 Predicting peak breach discharge due to embankment dam failure
Jasna Duricic, Tarkan Erdik and Pieter van Gelder
- 1377 Improved annual rainfall-runoff forecasting using PSO–SVM model based on EEMD
Wen-chuan Wang, Dong-mei Xu, Kwok-wing Chau and Shouyu Chen
- 1391 Development of a real-time regional-inundation forecasting model for the inundation warning system
Gwo-Fong Lin, Hsuan-Yu Lin and Yang-Ching Chou
- 1408 A machine learning approach for estimation of shallow water depths from optical satellite images and sonar measurements
Z. Vojinovic, Y. A. Abebe, R. Ranasinghe, A. Vacher, P. Martens, D. J. Mandl, S. W. Frye, E. van Ettinger and R. de Zeeuw
- 1425 Comparison of the robustness-based optimal designs of water distribution systems in three different formulations
Donghwi Jung, Doosun Kang, Gunhui Chung and Joong Hoon Kim
- 1437 Hydrological modeling using Effective Rainfall routed by the Muskingum method (ERM)
M. Baymani-Nezhad and D. Han
- 1456 Evaluation and application of Fuzzy Differential Evolution approach for benchmark optimization and reservoir operation problems
Dejan Vucetic and Slobodan P. Simonovic
- 1474 Supervised committee machine with artificial intelligence for prediction of fluoride concentration
Ata Allah Nadiri, Elham Fijani, Frank T.-C. Tsai and Asghar Asghari Moghaddam
- 1491 Aswan High Dam Reservoir management system
Noha Donia
