Contents

743 Study on relationships between climate-related covariates and pipe bursts using evolutionary-based modelling
   Daniele Laucelli, Balvant Rajani, Yehuda Kleiner and Orazio Giustolisi

758 Improving WetSpa model to predict streamflows for gaged and ungaged catchments
   Alireza Safari and F. De Smedt

772 Applying micro-genetic algorithm in the one-dimensional unsteady hydraulic model for parameter optimization
   Tsun-Hua Yang, Yu-Chi Wang, Shun-Chung Tsung and Wen-Dar Guo

784 Kernel methods for pier scour modeling using field data
   Mahesh Pal, N. K. Singh and N. K. Tiwari

797 Comparing grey formulations of the velocity-area method and entropy method for discharge estimation with uncertainty
   Stefano Alvisi, Silvia Barbetta, Marco Franchini, Florisa Melone and Tommaso Moramarco

812 Predicting the occurrence of stoneflies (Plecoptera) on the basis of water characteristics, river morphology and land use
   Koen Lock and Peter L. M. Goethals

822 Modelling uncertainty of flood quantile estimations at ungaged sites by Bayesian networks
   D. Santillán, L. Mediero and L. Garrote

839 Flow prediction in vegetative channel using hybrid artificial neural network approach
   Bimlesh Kumar

850 A framework to resolve spatio-temporal misalignment in component-based modelling
   Oliver Schmitz, Elga Salvadore, Lien Poelmans, Johannes van der Kwast and Derek Karssenberg

872 The impacts of climate change on water diversion strategies for a water deficit reservoir
   Chi Zhang, Xueping Zhu, Guangtao Fu, Huicheng Zhou and Hao Wang
890 The FluidEarth 2 implementation of OpenMI 2.0
Quillon Harpham, Paul Cleverley and David Kelly

907 Sampling/stochastic dynamic programming for optimal operation of multi-purpose reservoirs using artificial neural network-based ensemble streamflow predictions
Sedigheh Anvari, S. Jamshid Mousavi and Saeed Morid

922 Simulation of overflow nappe impingement jets
Luis G. Castillo, José M. Carrillo and Álvaro Sordo-Ward

941 Generating meshes for tidal wetland modeling using light detection and ranging (LiDAR) data
Ramona Stammermann and Michael Piasecki

952 Temporal multi-level coordination techniques oriented to regional water networks: application to the Catalunya case study
Cong Cong Sun, Vicenç Puig and Gabriela Cembrano

971 Erratum: Journal of Hydroinformatics 16(3), 633–648: Regionalization of landscape characteristics to map hydrologic variables, H. M. Peterson, J. L. Nieber, R. Kanivetsky and B. Shmagin
