Contents

Efficient water systems management

795 Editorial: Efficient water systems management
Vasilis Kanakoudis and Marco Franchini

798 Hydraulic characterization and transient response of pressure reducing valves: laboratory experiments
Silvia Meniconi, Bruno Brunone, Elisa Mazzetti, Daniele B. Laucelli and Giovanni Borta

811 A robust approach based on time variable trigger levels for pump control
Stefano Alvisi and Marco Franchini

823 Uncertainty in the analysis of urban water supply and distribution systems
George Tsakiris and Mike Spiliotis

838 Influence of intermittent water supply operations on the vulnerability of water distribution networks
Agathoklis Agathokleous, Chrystalleni Christodoulou and Symeon E. Christodoulou

853 Evaluation of the optimal size of a rainwater harvesting system in Sicily
Vincenza Notaro, Lorena Liuzzo and Gabriele Freni

865 Multicriteria performance analysis of an integrated urban wastewater system for energy management
Valeria Puleo, Vincenza Notaro, Gabriele Freni and Goffredo La Loggia

879 Optimal solving of the pump scheduling problem by using a Harmony Search optimization algorithm
F. De Paola, N. Fontana, M. Giugni, G. Marini and F. Pugliese

890 Optimizing DMAs’ formation in a water pipe network: the water aging and the operating pressure factors
Apostolos Chondronasios, Konstantinos Gonelas, Vasilis Kanakoudis, Menelaos Patelis and Panagiota Korkana

900 Forming DMAs in a water distribution network considering the operating pressure and the chlorine residual concentration as the design parameters
Konstantinos Gonelas, Apostolos Chondronasios, Vasilis Kanakoudis, Menelaos Patelis and Panagiota Korkana
Research Papers

911 Design and implementation of an operational multimodel multiproduct real-time probabilistic streamflow forecasting platform
Tirthankar Roy, Aleix Serrat-Capdevila, Juan Valdes, Matej Durcik and Hoshin Gupta

920 Optimal design of groundwater-level monitoring networks
Fahimeh Mirzaie-Nodoushan, Omid Bozorg-Haddad and Hugo A. Loáiciga

930 High temporal resolution rainfall rate estimation from rain gauge measurements
Yang Song, Dawei Han and Miguel A. Rico-Ramirez

942 Identification of indispensable components for a better drinking water quality management: Tunis case of study
M. Hassen Baouab and Semia Cherif

953 HydroMP – a computing platform for hydrodynamic simulation based on cloud computing
Ronghua Liu, Jiahua Wei, Yan Ren, Qi Liu, Guangqian Wang, Songdong Shao and Shuang Tang

973 Multi-objective optimization for sustainable groundwater management by developing of coupled quantity-quality simulation-optimization model
Asghar Kamali and Mohammad Hossein Niksokhan

993 Forecasting monthly energy production of small hydropower plants in ungauged basins using grey model and improved seasonal index
Chun-Tian Cheng, Shu-Min Miao, Bin Luo and Yong-Jun Sun
