Contents

Utilizing hydroinformatics for efficient water systems management

663 Editorial: Utilizing hydroinformatics for efficient water systems management
Vasilis Kanakoudis, Francesco De Paola and Stefano Alvisi

666 A nonparametric framework for water consumption data cleansing: an application to a smart water network in Naples (Italy)
Roberta Padulano and Giuseppe Del Giudice

681 Management of water distribution systems in PDA conditions using isolation valves: case studies of real networks
A. Fiorini Morosini, O. Caruso and P. Veltri

691 Numerical assessment of the vulnerability to impact erosion of a pump as turbine in a water supply system
Fecarotta Oreste, Messa Gianandrea Vittorio and Pugliese Francesco

713 Leakage reduction in WDNs through optimal setting of PATs with a derivative-free optimizer
Luigi Cimorelli, Andrea D’Aniello, Luca Cozzolino and Domenico Pianese

725 Energy production assessment in a complex hydropower development
Andrei-Mugur Georgescu, Sanda-Carmen Georgescu, Georgiana Dunca, Diana Maria Bucur and Alexandru Aldea

738 Assessment of seasonal and annual rainfall trend in Calabria (southern Italy) with the ITA method
T. Caloiero, R. Coscarelli and E. Ferrari

Technical papers

749 Riprap incipient motion for overtopping flows with machine learning models
Mohammad Najafzadeh and Giuseppe Oliveto

768 Uncertainty based budget allocation of wastewater infrastructures’ flood resiliency considering interdependencies
Mohammad Karamouz and A. Hojjat-Ansari
793 Experimental and numerical study of flood dynamics in a river-network-floodplain set-up
Vijay Kisan Mali, B. Veeranna, Aditya Parik and Soumendra Nath Kuiry

815 Waste load allocation under uncertainty using game theory approach and simulation-optimization process
Behnam Andik and Mohammad Hossein Niksokhan

842 Do direct and inverse uncertainty assessment methods present the same results?
Arman Ahmadi and Mohsen Nasseri

856 A cost-effective redundant communication system for improving the reliability of a flood early warning system
E. P. López, C. A. Vionnet, D. Villarreal, G. Contini, E. Veizaga and C. G. Ferreira

876 Towards a hybrid algorithm for the robust calibration of rainfall–runoff models
Umut Okkan and Umut Kirdemir

900 Daily runoff forecasting based on data-augmented neural network model
Xiao-ying Bi, Bo Li, Wen-long Lu and Xin-zhi Zhou

916 Optimization of dam’s spillway design under climate change conditions
Ahmad Ferdowsi, Sayed-Farhad Mousavi, Saeed Farzin and Hojat Karami

937 A hybrid drought index for drought assessment in Wadi Shueib catchment area in Jordan
Odai Al Balasmeh, Richa Babbar and Tapas Karmaker
