Modelling Hydrodynamics for Water Resources

957 Editorial: Modelling Hydrodynamics for Water Resources
P. Brufau, P. Garcia-Navarro and J. Murillo

958 Review of imaging-based measurement techniques for free surface flows involving sediment transport and morphological changes
Sandra Soares-Frazão

972 Adaptation of flux-based solvers to 2D two-layer shallow flows with variable density including numerical treatment of the loss of hyperbolicity and drying/wetting fronts

1015 A 1D shallow-flow model for two-layer flows based on FORCE scheme with wet-dry treatment
S. Martínez-Aranda, A. Ramos-Pérez and P. García-Navarro

1038 Discontinuous Galerkin well-balanced schemes using augmented Riemann solvers with application to the shallow water equations

1059 Wavelet-based local mesh refinement for rainfall–runoff simulations
Ilhan Özgen-Xian, Georges Kesserwani, Daniel Caviedes-Voullième, Sergi Molins, Zexuan Xu, Dipankar Dwivedi, J. David Moulton and Carl I. Steefel

1078 Agent-based modelling of pedestrian responses during flood emergency: mobility behavioural rules and implications for flood risk analysis
Mohammad Shirvani, Georges Kesserwani and Paul Richmond

1093 Analysis of the performance of different culvert boundary conditions in 2D shallow flow models

1122 A coupled 1-D/2-D model for simulating river sediment transport and bed evolution
Mezbache Salheddine, Paquier André and Hasbaia Mahmoud
1138   A robust two-dimensional model for highly sediment-laden unsteady flows of variable density over movable beds
   S. Martínez-Aranda, J. Murillo and P. García-Navarro

1161   Experimental dataset and numerical simulation of floating bodies transport in open-channel flow
   Elisabetta Persi, Gabriella Petaccia, Stefano Sibilla, Pilar Brufau and José Ignacio García-Palacin

1182   A GPU-based 2D shallow water quality model
   Geovanny Gordillo, Mario Morales-Hernández, I. Echeverribar, Javier Fernández-Pato and Pilar García-Navarro

1198   Analysis of the performance of a hybrid CPU/GPU 1D2D coupled model for real flood cases
   Isabel Echeverribar, Mario Morales-Hernández, Pilar Brufau and Pilar García-Navarro

1217   High-performance computing in water resources hydrodynamics

Technical papers

1236   Optimal hydropower operation of multi-reservoir systems: hybrid cellular automata-simulated annealing approach
   Mohamad Azizipour, Ali Sattari, Mohammad Hadi Afshar, Erfan Goharian and Samuel Sandoval Solis

1258   Design of irrigation canals with minimum overall cost using particle swarm optimization – case study: El-Sheikh Gaber canal, north Sinai Peninsula, Egypt
   Hamdy A. El-Ghandour, Emad Elbeltagi and Mohamed E. Gabr

1270   Parameter estimation of soil hydraulic characteristics by inverse modeling of the analytical equation for unsaturated subsurface water flow
   Luiz Fernando Coutinho de Oliveira, Gabriela Rezende de Souza, Flávia Vilela Corrêa and Jaíza Ribeiro Mota e Silva

1283   Mid- to long-term runoff prediction by combining the deep belief network and partial least-squares regression
   Zhaoxin Yue, Ping Ai, Chuansheng Xiong, Min Hong and Yanhong Song

1306   Leak detection in virtually isolated pipe sections within a complex pipe system using a two-source-four-sensor transient testing configuration
   He Shi, Jinzhe Gong, Angus R. Simpson, Aaron C. Zecchin and Martin F. Lambert

1321   Pipeline leak detection using the multiple signal classification-like method
   Juan Li, Ying Wu and Changgang Lu

1338   Flood-inundation modeling in an operational context: sensitivity to topographic resolution and Manning’s n
   Sarah Praskievicz, Shawn Carter, Juzer Dhondia and Michael Follum
1351 A 2D HLL-based weakly coupled model for transient flows on mobile beds
Robin Meurice and Sandra Soares-Frazão

1370 Efficient approach toward the application of the Godunov method to hydraulic transients
Susovan Pal, Prashanth Reddy Hanmaiahgari and Martin F. Lambert

1391 River flow sequence feature extraction and prediction using an enhanced sparse autoencoder
Lipeng Qian, Junfeng Li, Changzheng Liu, Junhong Tao and Fulong Chen

1410 Assessment of artificial intelligence models for calculating optimum properties of lined channels
Majid Niazkar

Masoumeh Rostam-Abadi
