

Journal of Water and Health

A Journal of the International Water Association

volume 05 | supplement 1 | 2007

Contents

- iii Prologue
- 1 Fault tree analysis of the causes of waterborne outbreaks
Helen L. Risebro, Miguel F. Doria, Yvonne Andersson, Gertjan Medema, Keith Osborn, Olivier Schlosser and Paul R. Hunter
- 19 Surveillance of waterborne disease in European member states: a qualitative study
Helen L. Risebro and Paul R. Hunter
- 39 Assessment of source water pathogen contamination
Magali Dechesne and Emmanuel Soyeux
- 51 Incorporating method recovery uncertainties in stochastic estimates of raw water protozoan concentrations for QMRA
Susan R. Petterson, Ryan S. Signor and Nicholas J. Ashbolt
- 67 Identification and management of microbial contaminations in a surface drinking water source
J. Åström, T. J. R. Pettersson and T. A. Stenström
- 81 Evaluation of the microbial risk reduction due to selective closure of the raw water intake before drinking water treatment
J. Åström, S. Petterson, O. Bergstedt, T. J. R. Pettersson and T. A. Stenström
- 99 SCADA data and the quantification of hazardous events for QMRA
P. Nilsson, D. Roser, R. Thorwaldsdotter, S. Petterson, C. Davies, R. Signor, O. Bergstedt and N. Ashbolt
- 107 How can the UK statutory *Cryptosporidium* monitoring be used for Quantitative Risk Assessment of *Cryptosporidium* in drinking water?
P. W. M. H. Smeets, J. C. van Dijk, G. Stanfield, L. C. Rietveld and G. J. Medema
- 119 Incidence of faecal contaminations in chlorinated and non-chlorinated distribution systems of neighbouring European countries
Beate Hamsch, Karin Böckle and J. Hein M. van Lieverloo
- 131 Quantitative microbial risk assessment of distributed drinking water using faecal indicator incidence and concentrations
J. Hein M. van Lieverloo, E. J. Mirjam Blokker and Gertjan Medema
- 151 Estimation of the consumption of cold tap water for microbiological risk assessment: an overview of studies and statistical analysis of data
M. N. Mons, J. M. L. van der Wielen, E. J. M. Blokker, M. I. Sinclair, K. F. A. M. Hulshof, F. Dangendorf, P. R. Hunter and G. J. Medema
