Water infrastructure planning, management and design under climate uncertainty: Methods and approaches in support of the UN High-level Experts and Leaders Panel on Water and Disasters (HELP)

Preface
Jerome Delli Priscoli

Special Issue for UN HELP: ‘Water infrastructure planning, management and design under climate uncertainty’
Eugene Z. Stakhiv and Kenzo Hiroki

Towards pragmatism in climate risk analysis and adaptation
Robert Leonard Wilby, Xianfu Lu, Paul Watkiss and Charles Andrew Rodgers

Water-related infrastructure investments in a changing environment: a perspective from the World Bank
Diego J. Rodríguez, Homero A. Paltán, Luis E. García, Patrick Ray and Sarah St. George Freeman

Climate risk-informed decision analysis (CRIDA): ‘top-down’ vs ‘bottom-up’ decision making for planning water resources infrastructure
Joe Manous and Eugene Z. Stakhiv

Evolution of Japan’s flood control planning and policy in response to climate change risks and social changes
Toshio Koike

Climate change adjustments in engineering design standards: European perspective
Zbigniew W. Kundzewicz and Paweł Licznar

The centrality of engineering codes and risk-based design standards in climate adaptation strategies
Eugene Z. Stakhiv

Anticipated maximum scale precipitation for calculating the worst-case floods
Kuniyoshi Takeuchi and Shigenobu Tanaka
144 Screening for nonstationary analysis
    Paul H. Kirshen

156 How Hurricane Katrina influenced the design of hurricane protection and risk reduction systems and national approaches to risk and resilience: Part 1. Hurricane Katrina and New Orleans: A forensic assessment, risk and reliability analysis, and key lessons learned
    Lewis E. Link

174 How Hurricane Katrina influenced the design of hurricane protection and risk reduction systems and national approaches to risk and resilience. Part 2: Designing the Hurricane and Storm Damage Risk Reduction System and resulting long-term engineering guidance and practice changes
    Lewis E. Link

188 Infrastructure capacity planning for reducing risks of future hydrologic extremes
    John J. Boland and Daniel Peter Loucks

202 US Flood risk management in changing times
    Gregory B. Baecher and Gerald E. Galloway

216 On the need for streamflow drought frequency guidelines in the U.S.
    Richard M. Vogel and Charles N. Kroll

232 Incorporating decadal climate variability information in the operation and design of water infrastructure
    J. Rolf Olsen, Vikram M. Mehta and Harvey Hill
