Aims and Scope
Waste Science and Technology publishes peer-reviewed papers on all aspects of the science and technology of water pollution control and water quality management worldwide. The encompass areas for broad areas:

- wastewater treatment and transportation processes for stormwater and domestic, industrial and municipal effluents
- Sources of pollution including hazardous wastes and socio-environmental aspects
- Effects and impacts of pollution on rivers, lakes, groundwater and marine waters
- Water reuse and aquatic environmental restoration
- Policy, strategic control and management aspects of water quality

Waste Science and Technology – together with WST: Water Supply and Water Practice and Technology – has a special mission to serve as a bridge between science, engineering applications and management aspects of water as represented by the many IWA specialist groups and other similar groups. Papers describing progress in full scale implementations are particularly encouraged.
