Aims and Scope

Water Science and Technology publishes peer-reviewed papers on all aspects of the science and technology of water pollution control and water quality management worldwide. This encompasses five broad areas:

- Water treatment and transportation processes for stormwater and domestic and industrial municipal effluents.
- Sources of pollution including hazardous waste and source control.
- Effects and impacts of pollution on rivers, lakes, groundwaters and marine waters.
- Water reuse and aquatic environmental restoration.
- Policy, strategic, control and management aspects of water quality.

Water Science and Technology – together with WST, Water Supply and Water Practice and Technology – has a special mission to serve as a bridge between science, engineering applications and management aspects of water as represented by the many IWA specialist groups and other similar groupings. Papers describing full scale implementations are particularly encouraged.

Disclaimer
